

## Scenario:

You are a University of South Carolina Student who is quarantined due to exposure to the coronavirus vaccine from one of your roommates who went out in Five Points and started feeling sick. You have a gluten allergy and do not eat any food that comes from a pig due to you and your family's religious beliefs.

**Task 1:** Open the app and edit your diet/allergy preferences. Enter in that you are allergic to gluten and do not eat pig/pig based products.

**Task 2:** Open the app and access the page for providing feedback. Create a new feedback entry and write a report on a meal they gave you that included something you could not eat.

**Task 3:** You have an issue where you realize they didn't leave you any towels in your room. Access the contacts pages and dial the 24/7 university contact in order to get some help.

## Notes:

Changes:

- 1) Make better/cleaner descriptions of each functionality.
- 2) Create submit buttons or save options for entries.
- 3) Add a way to make requests or give suggestions back.
- 4) Add a way to get in touch with university sponsored mental health personnel?

Things to keep:

- 1) Functionalities are pretty clean and accessible.
- 2) Accessible for all allergies/dietary needs.
- 3) Lots of ways to provide feedback.
